PROFESSIONAL SUMMARY

Software engineer with 5+ years building production systems in real-money gaming, quick-commerce, and consumer AI. Currently SDE-II at Junglee Games, where I architected the backend for a UK raffle platform that reached 120K+ users within 97 days and own the deposit stack on Junglee Rummy, including custom UPI and CVV-less payments that lifted transaction success by 30%. Previously tech lead at Hexon Global, leading four engineers on event-driven Spring Boot and Kafka services for a quick-commerce platform. Also built two AI products end-to-end, covering multi-agent LLM orchestration and real-time player profiling.

SKILLS

- **Languages**: Java, JavaScript, TypeScript, Python, C/C++, Dart, SQL.
- **Backend:** Spring Boot, Spring Security, REST APIs, SSE/streaming.
- **Architecture & System Design:** Distributed Systems Design, High-Traffic & Large-Scale Systems, Scalability & Performance Optimization, Event-Driven Architectures, Caching Strategies & Data Modeling, Reliability, Availability & Fault-Tolerant Systems, Service-Oriented Microservices Architecture, concurrency, and observability.
- **AI Engineering:** Agent orchestration, multi-agent systems, prompt caching, intent-based model routing, vector similarity (KNN).
- **Mobile:** Flutter, Firebase, custom platform plugins, Shorebird OTA, Play Store release management.
- **Tools:** GitHub Actions, Bitbucket Pipelines, Fastlane, New Relic, CI/CD design.
- **Database & Infra:** MySQL, PostgreSQL, Redis, Elasticsearch, Apache Kafka, Docker & Docker Compose, AWS.
- **Leadership and Collaboration:** Technical Leadership, Cross-Functional Coordination, Product Thinking.

EXPERIENCE

- **Junglee Games** *Oct 2024 — Present*
  SDE-II *Gurgaon, Haryana*
  - Architected and shipped the backend for a UK-market raffle platform in **97 days**, scaling to **120K+ active users** post-launch.
  - Designed and built the Instant Win engine for real-time prize resolution with **deterministic windowed draws** and **atomic prize-pool** allocation, guaranteeing a single winner per prize under concurrent load via a uniqueness constraint on window ID.
  - Pioneered the adoption of generative and agentic **AI platforms** (Claude, Google Antigravity) across the full software development lifecycle to orchestrate code generation, architecture planning, and test automation.
  - Owned the deposit flow end-to-end across backend and client, shipping custom UPI and CVV-less payments on a **real-money platform** and lifting transaction success 30%.
  - Drove Flutter architecture on Junglee Rummy, enforced modular **Clean Architecture** across the codebase, authored custom plugins, cut app size **30%**, and shipped **OTA releases** via Shorebird on CI/CD pipelines (Bitbucket, Fastlane) built for automated build and distribution.
  - Designed and shipped an **LLM-based PR review system** that automatically analyzes diffs for architecture violations, performance regressions, and convention drift, adopted team-wide, cutting review turnaround.
  - Partnered closely with product, business, analytics, risk, and other engineering stakeholders to translate complex business requirements into scalable technical solutions.

- **Hexon Global** *Jul 2022 — Oct 2024*
  Senior Software Engineer *Morgan Hill, California*
  - Tech lead for MB Daily, a quick-commerce platform: owned architecture and led 4 engineers, scaling the system from **~100 to 5k+** users and **~1k** orders/day on **event-driven Spring Boot** services over **Kafka**.
  - Built order management, partial fulfillment, and **express delivery** as event-driven services on Kafka, decoupling payment state from fulfillment state so orders proceed while payment settles asynchronously, combined with one-tap reorder from saved **tokenized payment** and address details, this cut order cancellations from **20% to 5%**.
  - Built the inventory service with per-store stock tracking, **TTL-backed cart reservations**, and **atomic conditional decrements** preventing oversell under concurrent checkout, stock-change events propagate to back-in-stock notifications, catalog cache invalidation, and dark-store serviceability checks.
  - Shipped both mobile apps end-to-end in flutter, consumer ordering with **live order tracking**, and a **delivery-agent app** with background location streaming and **offline-tolerant** status updates.

• Unthinkable Solutions

Jan 2021 — Jul 2022

Associate IT - Developer

Gurgaon, Haryana

- Developed and deployed **3+ production apps** to the App Store and Play Store, owning features end-to-end from design through release.
- Built the **voice recognition layer** powering in-app navigation and actions, mapping natural speech to app intents across modules and setup cross module deeplink.
- Developed reusable Flutter plugins and shared components to standardize native integrations and reduce duplicated implementation effort across applications.
- Created unit and integration test cases to ensure **robust** and **reliable** application performance.

PERSONAL PRODUCTS

• LocusPlay

[LINK]

Game-agnostic player-profiling

- Built a **game-agnostic AI intelligence** layer that turns raw gameplay events into a per-player trait profile, powering matchmaking, adaptive difficulty, wellbeing detection, and recommendations behind two HTTP endpoints.
- Architected the LLM off the hot path: deterministic aggregation computes ~**25 metrics** per session, one async model call produces a typed **7-trait profile** via forced tool call, and every real-time read is vector arithmetic **1–7 ms** with zero inference on the request path.
- Cut model spend ~**40x** versus per-request inference by profiling once per session with a **prompt-cached** rubric, and kept the system available through provider outages with a deterministic profiler fallback.
- Built playstyle matchmaking on **vector KNN**, an adaptive-difficulty control loop targeting a **45–55%** win band, and auditable wellbeing rules that attach triggering evidence to every flag for regulator and support review.
- Validated with a simulated-population **harness** recovering latent player traits at **r** = **0.96**, including a new genre onboarded with zero code changes.

• AstroRegal

AI astro-psychology companion built on a precision KP/Vedic chart engine

- Built a **dual-agent AI orchestrator**: a streaming front agent answers users while an async side agent reads behavioral signals from Redis and injects steering directives into the next turn, never blocking the response stream.
- Designed a tool-calling runtime over 11 astrology tools with per-tool credit metering, tier pricing, and intent-based model routing that cut projected inference spend ~10x.
- Built the **KP astrology engine** from scratch, **5-layer core**, 28 modules, 17 test suites over Swiss Ephemeris native C bindings, computing a 5-level sub-lord hierarchy for event promise, timing, and transit analysis.

EDUCATION

• Noida Institute of Engineering & Technology, Greater Noida

2017 — 2021

Bachelor of Technology major in Computer Science & Engineering

CGPA: 7.7/10

• Jagran Public School, Noida

2016 — 2017

Senior Secondary Education

Percentage: 86%
